

Core Matters

Collaboration between Nursing and Spanish for Professionals

Susan Michele Blankenship, Ed.D., MSN, RN-BC

Beatriz Potter, Ed.D.

Valdosta State University

August 8, 2017

Introduction

- Our work involved integration of 2 courses
 - **Spanish for Professionals (SPAN-3012)** and
 - **Nursing (NURS-3203)**
- Cultural education and language learning skills of Nursing and Spanish for Professionals (SFP)- Healthcare students were emphasized
- Virtual and traditional simulations targeted diversity and language skills
- In this presentation we describe importance of lower level Core classes, outcomes, lessons learned, and plans for the future

Background

- Nursing professionals are in great demand and employment opportunities now and into the future are excellent
- This is especially so for those who are bilingual and can effectively communicate with non-native English speakers in clinical and non-clinical settings
- The greatest need is for nurses who are **Spanish/English** speakers. The USA's population of native Spanish speakers continues to increase and in many cases they have limited ability to communicate in English
- Nursing and medical students have been found to have an unconscious bias against Hispanic patients
- Thus a working knowledge of **Spanish** when providing healthcare to this group is essential

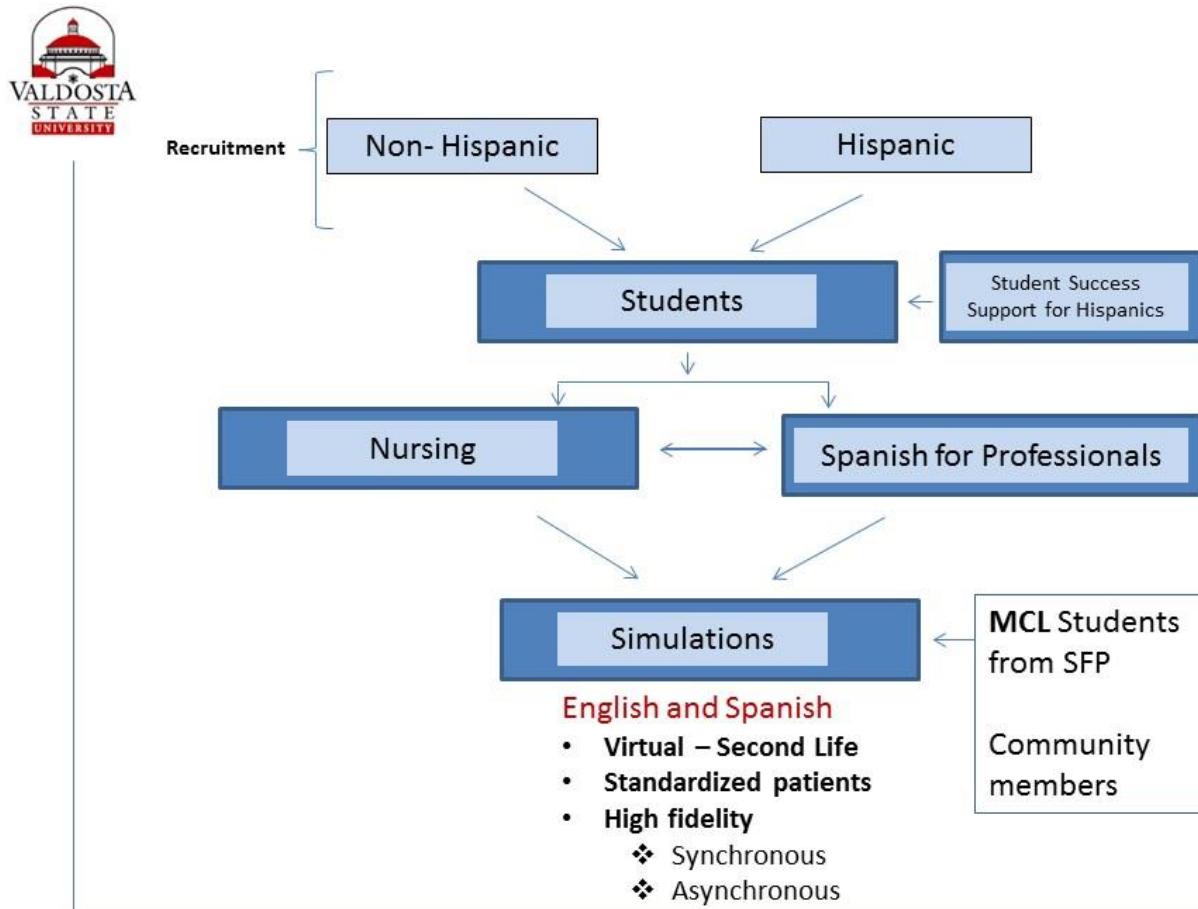

Rietig & Squires, 2015; Bean et al. 2013; Bosch, Doshier, & Gess-Newsome, 2012 .

Background, continuation

- These observations motivated our work which focused on enhancing the academic success of Nursing and Spanish for Professional (SFP)-Healthcare students.
 - Bosch, Doshier, and Gess-Newsome (2012) found that **Hispanic nursing students were at a greater risk for attrition** during their education due to “**weak academic backgrounds, a history of poor academic performance, and/or lack of experience with rigorous science and math classes**” (p. 90).
 - In addition, Torregosa, Ynalvez, and Morin (2015) observed that strong “**academic networks**” **were essential to minority students’ success in nursing programs**.
- We provided opportunities for students to interact with Spanish speaking patients and improve their Spanish speaking and interpreting skills in a safe environment.

Vision of Collaboration

Core Courses Matter

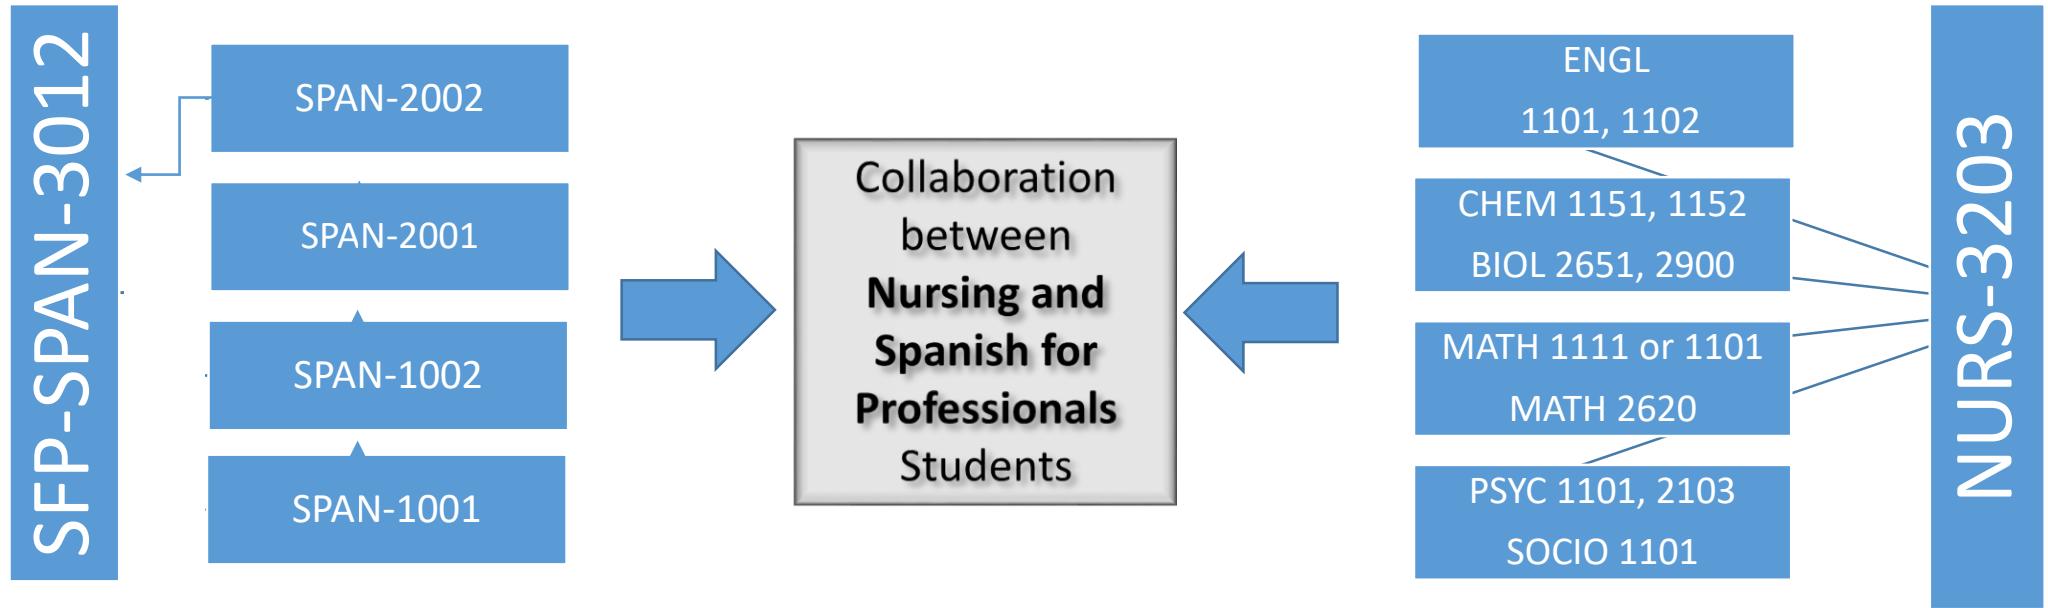

Core courses provide the essential foundation

- The SFP Certificate students need to demonstrate proficiency in Spanish at the Intermediate mid-level of proficiency as defined by the American Council on the Teaching of Foreign Languages Proficiency Guidelines (ACTFL) or have successfully completed **SPAN-2002**
- Nursing students need to complete the rigorous core courses including **English, Math, Science but no foreign language requirements**

But

- Gaining experience through this bilingual collaboration will enhance their cultural and language skills which in turn will increase their marketability and earning power

Core Requirements

Spanish – SPAN

Spanish for Professionals Certificate – SPF

- Health
- Business & Finance
- Criminal Justice

CORE - AREA C

Nursing – NURS

English – ENGL

Chemistry – CHEM

Biology – BIOL

Psychology – PSYCH

Sociology – Sociology

CORE - AREA A, B, D.2.b., E, and F

Creating and Maintaining the Collaboration

- Creating Collaboration
 - Find someone interested in your vision
 - Merging your vision with the vision of your partner
 - Set realistic goals
- Maintaining Collaboration
 - Open communication
 - Flexibility
 - Ability to utilize each others strengths
 - Evaluate progress and adjust as needed
 - Opportunities to continue networking and funding

Highlights of Collaboration

- Settings
 - Created Virtual Environment in Second Life to allow students to interact.
 - Developed and implemented training for faculty and students.
 - The STEP Center was utilized for face-to-face interactions.
 - SFP introduced to simulation equipment and environment
- Students
 - Nursing and SFP-Healthcare students interacted in Second Life
 - Some students were enrolled in both programs.
 - SFP-Healthcare Students (both online and hybrid) attended traditional simulation as patients, family, and interpreters.

Results of Student Surveys Regarding Simulation

- 75% of students ($n=5$) in the **traditional simulation**/ 60% of students ($n= 15$) in the **virtual simulation**
 - reported that they were intellectually challenged by the simulation experience
- SL Training is fundamental for virtual simulations
 - Should be completed prior to starting the semester where SL would be used
- Nursing students were positive about ability to interact with SFP students
- Assisted student in language skills development and fluency
- Students exposed to cultural differences of Hispanic patients

Advantages of Multidisciplinary Simulation

- Allowed Nursing and SFP-Healthcare students to interact in a safe learning environment
- Allowed students to practice using a medical interpreter to communicate with patients and families
 - “in-person” and “in-the-box”
- Helped to increase the confidence of the participants in the use of language and situations
- Encouraged cultural diverse interactions
- Exposed students to unexpected situations

Challenges for Multidisciplinary Students

- Communication between Spanish-speaking patient and English-speaking nurse
- Use of interpreters delayed interactions with patients and families with slower responses to patients
- Differences in communication using “in-person” and/or “in-the-box” interpreter
- Hispanic family members interfering with situations
- HIPPA concerns about communication between students and family member

Testimonials

Nursing and Spanish for Professional Students

- *"I hope the SFP program and nursing simulation relationship continues to grow and improve. It's a useful track for nursing students interested in translating their love of languages into the healthcare setting. I only wish the SFP program were more widely advertised to pre-nursing and nursing students."*
- *"Participating in this program has increased my confidence in clinical situations with Hispanic families."*

Nursing students

- *"It open my eyes to a different perspective."*
- *"It was a great learning experience for future situations where I have a patient or family that speaks a different language then English. It helped me feel more prepared and taught me how to handle a situation similar to this one next time I encounter one."*

Spanish for Professional Students

- *"It had a positive impact. I am actually considering testing to become a medical interpreter."*
- *"It helped improved my fluency in the Spanish language."*

Future of Collaboration

- Search for funding to continue collaboration
- Establish curriculum for a bilingual nursing program.
- Create specific Spanish for Professional (SFP) course for perspective nursing students
- Support and mentor of Hispanics and other minority nursing/health professional students
- Acquire supplemental literature/applications to support Hispanic students in preparing for testing and admission to nursing program
- Recruit Hispanic and international students

Ultimately, we envision this program as a
pilot program for the
University System of Georgia

VSU Second Life Innovation Group

- SL Developers
 - Karen Acosta, Ph.D., Assistant Professor, Spanish
 - Fleming L. Bell, Ph.D., Assistant Professor, Spanish
- SL Designing and Training Course
 - Michelle A. Ocasio, Ph.D., Assistant Professor, Spanish
- SL Simulations and Implementation
 - Beatriz Potter, Ed.D., Senior Lecturer
 - Susan Michele Blankenship, Ed.D., MSN, RN-BC, Director of Simulation

VSU Collaborators

- Nursing
 - Bonni Cohen, DNP, Associate Dean of Nursing
 - Michelle Ritter, DNP, Associate Professor, Nursing
 - Dola Patel, RN, Graduate Assistance
- MCL
 - Viki Soady, Ph.D., Professor and past MCL Department Head
 - Ofelia Nikolova, Ph. D., Interim Department Head; Professor
- Media Center
 - Kyle Culpepper, M.Ed., Instructional Technology Specialist
 - Andrew G. Scott, Computer Services Assistant
