

If you receive a “Missing Theme” error in ADP it means the system is forced to use the most recent version of Java (JRE) even though it is not compatible with ADP system. In order to allow the system to use correct version of JRE, uncheck the Use JRE 1.n.n_nn box as shown below. To access this screen, open your Internet Explorer browser and:

Click: Tools
Internet Options
Advanced

Scroll: until you see this checkbox
