

## **Respondus 101**

Respondus is a Windows application that enhances the functions and features of quizzes, surveys, and self-tests in BlazeVIEW (powered by Blackboard Vista 8). Respondus allows you to author quizzes offline, import existing questions from a word processing file, and publish the quizzes directly to your BlazeVIEW course. The application can be used to manage and print multiple versions of your test for face to face courses. **(Currently this training is for faculty who are using BlazeVIEW.)**
