

April 2016 Update BlazeVIEW to Brightspace 10.5.6

1 of 1

Release conditions - NOT operator support

New release condition types that support the NOT operator have been added to D2L Learning Environment to support or identify users who have not completed course items. The following release conditions are being added to the release condition function:

- Incomplete checklist - **Has not completed the specified checklist.**
- Incomplete checklist item - **Has not completed specified checklist item.**
- Content topic not visited - **Has not visited the specified content topic.**
- No discussion posts authored in topic - **No threads added to the specified discussion topic.**
- No discussion posts or replies authored in topic **No threads or replies added to the specified discussion topic.**
- No submission to dropbox - **Has not submitted to the specified dropbox folder.**
- No grade score - **Not graded on specified grade item.**
- No completed quiz attempt - **Has not completed an attempt on the specified quiz.**

The new release conditions can be used anywhere release conditions are supported in D2L Learning Environment, including Intelligent Agents, Content items, and the News Tool. The new options provide additional choices for course setup and user tracking.

This feature implements PIE item D126 and D2184.
