

Native Ferns Workshop

Dr. Richard Carter, VSU

Saturday, August 7

Weather permitting, we will conduct a morning field survey for ferns and lycophytes in a variety of habitats, with emphasis on their field identification and habitat associations. After lunch we will work indoors surveying diagnostic features useful in identification of a diverse array of ferns and lycophytes of Georgia, including life history, general aspects of classification, and some use of identification keys.

In case of bad weather, the alternate date will be the following Saturday, August 14.
Contact 229-339-3966 or heather.brasell@gnps.org to register.

Saturday xx am to xx pm
