10 August 2010

## INTRODUCTION

The purpose of this survey is to provide baseline data for use in developing a landscape design for St. Barnabas Episcopal Church. The primary objectives were to identify, locate, and map existing trees or other woody plants with landscaping potential and to note the presence of non-indigenous invasive plants.

## METHODS

The study area comprises the property herein designated as St. Barnabas Episcopal Church, located at 3565 Bemiss Road, Valdosta, Georgia. Boundaries of the study area are shown in Figure 1. The survey was conducted on 05 August 2010 from 0815-1215 and 1315-1745. During the survey period, the maximum ambient temperature was 93.9°, and the maximum relative humidity 90% (Weather Underground, 2010). The survey team consisted of two individuals: Richard Carter and James R. Sanderson (student volunteer). Within the study area, the following data were recorded for all trees with a stem diameter at breast height (DBH)  $\geq$  25 mm: identification to species, DBH, and geographical location (latitude/longitude as decimal degrees. Trees were located and data were recorded with a handheld Garmin GPSmap 60CSx global positioning unit; the margin of error throughout

Figure 1. The location of the St. Barnabas Episcopal Church property in Valdosta, Georgia, just north of the intersection of Bemiss Road (Hwy. GA 125) and Mt. Zion Church Road.

the survey period was 9 feet. Additionally, location data and species identifications were recorded for special interest trees and shrubs with a DBH less than 25 mm or certain other plants for which the minimum DBH was not applicable (i.e., small individuals of native trees with potential as landscaping elements, or exotic invasive species). DBH was measured with a metric diameter equivalent tape, or rarely estimated when necessitated by field conditions (i.e., when vine-coverage of boles was exceptionally high or when yellow jacket nests were encountered). Using methods described by Cox (1967), relative frequency and relative dominance were calculated for trees with DBH  $\geq$  25 mm. Other plant species observed were also identified and noted. Data were downloaded from the GPS into MS Excel for analysis and into ExpertGPS™ and Google™ Earth (Google Inc., 2009) for visual presentation. Mapped data were also exported and made available to Mr. Brett Ganas, Ganas Landscape Designs Inc., as a CAD Drawing Exchange File (\*.dxf). Wunderlin and Hansen (2008) was used for nomenclature and information on nativity of species, and Godfrey (1988) was used for taxonomic concepts of species.

## RESULTS

Table 1 contains summary data from the active logs for both morning and afternoon tracks, and Figure 2 shows these tracks plotted together using Google™ Earth. The results of the tree survey are presented in Appendix A and Figures 3-8, and the general floristic inventory in Appendix B. More than 400 individual woody plants were located and identified. Based upon relative frequency and relative dominance (Figures 3 and 4), the most prevalent species were *Quercus nigra* (water oak), *Pinus taeda* (loblolly pine), *Carya illinoensis* (pecan), and *Q. virginiana* (live oak), and the largest specimen trees were of *Carya illinoensis*, *Quercus virginiana*, *Quercus nigra*, and *Pinus taeda* (cf. Appendix A). The high proportion of pecan and the presence of many other non-indigenous species at the St. Barnabas site are indicative of prolonged anthropogenic disturbance (Figures 3 and 4, Appendices A and B). For the most part, the St. Barnabas property is situated in an abandoned pecan grove, hence the high proportion of mature, non-indigenous pecan trees. [Note: Although native to the southeastern United States, pecan is not indigenous to Georgia, its native range being farther to the west in the middle-south: black-belt of Alabama westward into eastern Texas.] The relative proportions of loblolly pine, water oak, and live oak indicate ecological succession toward a hardwood dominated community, which eventually, in the absence of further disturbance and fire, would likely include the following trees: *Quercus virginiana*, *Q. alba*, *Q. michauxii*, *Q. hemisphaerica*, *Carya glabra*, *C. tomentosa*, *Magnolia grandiflora*, *Fagus grandifolia*, *Tilia*, *Pinus taeda*, *P. glabra*, *Osmanthus americanus*, *Chionanthus virginicus*, *Ilex americana*, *I. vomitoria*, *Carpinus caroliniana*, *Ostrya virginiana*, *Vaccinium arboreum*, *Viburnum rufidulum*, *Lyonia ferruginea*, etc.

In addition to native woody plants with positive landscaping potential, a number of non-indigenous invasive trees, shrubs, and vines were noted in the study area: *Sapium sebiferum* (Chinese tallow tree),

Figure 2. Track (blue line) recorded by GPS during tree survey; cf. Table 1 for summary of log.

Table 1. Summary data of tree survey obtained from GPS log.

Morning log 2010-08-05	Afternoon log 2010-08-05	Daily totals 2010-08-05
Distance: 3.2 km	Distance: 3.7 km	Distance: 6.9 km
Average speed: 803.2 m/hr	Average speed: 934.1 m hr	Duration: 7 hrs 54 min
Duration: 3 hrs 56 min	Duration: 3 hrs 58 min	

*Ligustrum lucidum* (glossy privet), *Ligustrum sinense* (Chinese privet), *Albizia julibrissin* (mimosa), *Cinnamomum camphora* (camphor tree), *Nandina domestica* (nandina), *Ardisia crenata* (coralberry), *Lonicera japonica* (Japanese honeysuckle), and *Lygodium japonicum* (Japanese climbing fern). Large individuals of invasive trees and shrubs can produce copious numbers of seeds; therefore, an attempt was made to locate and map these in the hope they might receive highest priority for removal (cf. Appendix B, Figures 8A-B).

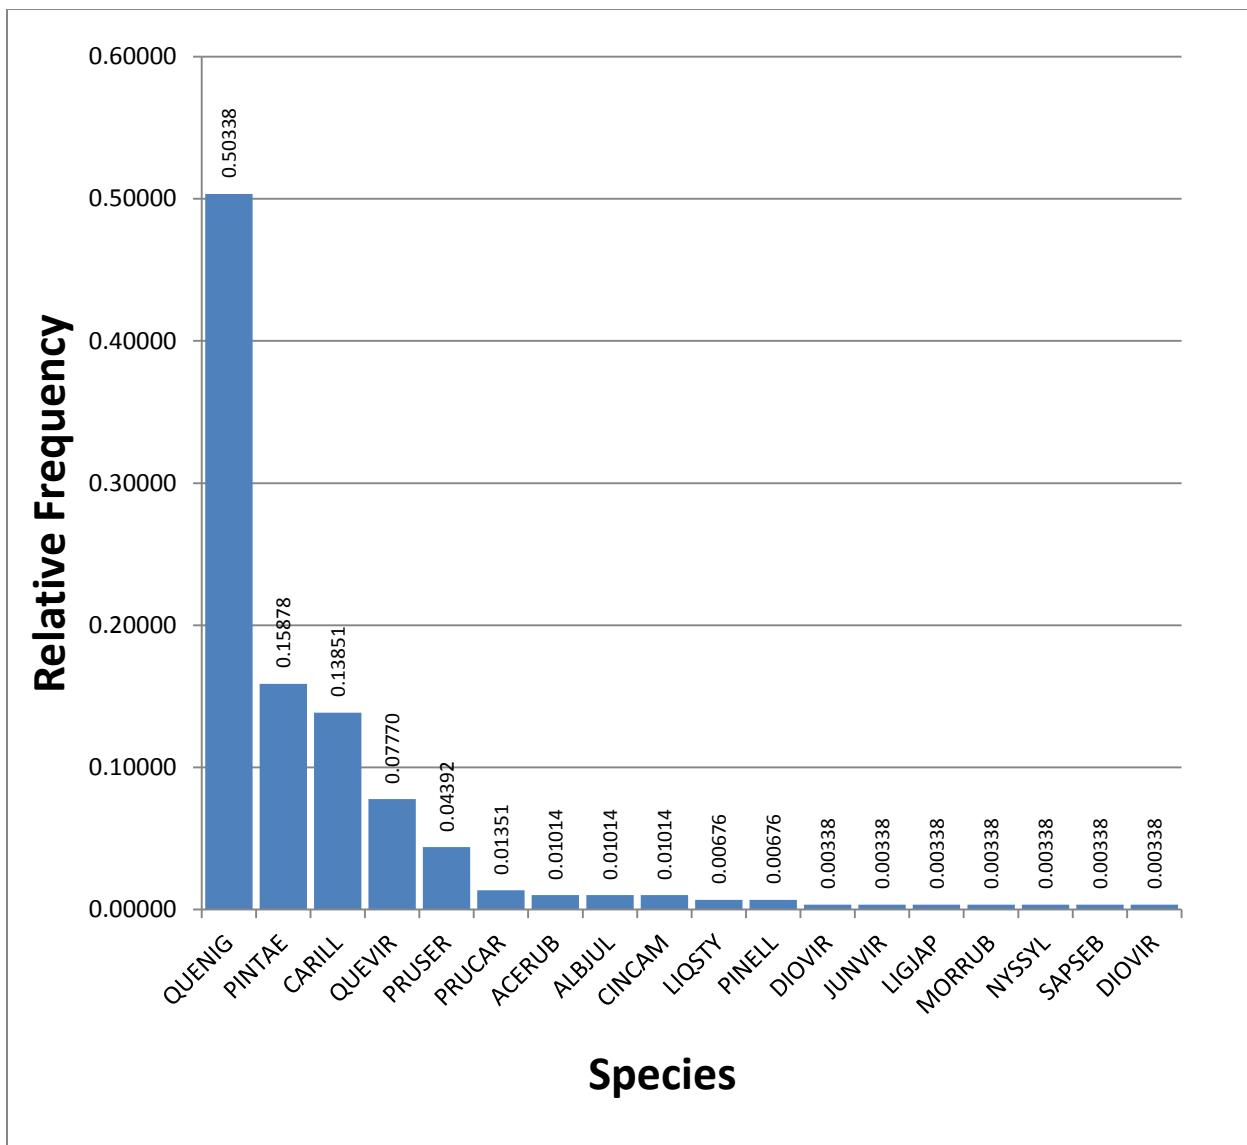

Figure 3. Relative frequency of trees with DBH  $\geq 25$  mm. Key to abbreviations: ACERUB = *Acer rubrum* / red maple; ALBJUL = *Albizia julibrissin* / mimosa; CARILL = *Carya illinoensis* / pecan; CINCAM = *Cinnamomum camphora* / camphortree; DIOVIR = *Diospyros virginiana* / persimmon; JUNVIR = *Juniperus virginiana* / red cedar; LIGLUC = *Ligustrum lucidum* / glossy privet; LIQSTY = *Liquidambar styraciflua* / sweetgum; MORRUB = *Morus rubra* / red mulberry; NYSSYL = *Nyssa sylvatica* / blackgum; PINELL = *Pinus elliottii* / slash pine; PINTAE = *Pinus taeda* / loblolly pine; PRUCAR = *Prunus caroliniana* / Carolina laurelcherry; PRUSER = *Prunus serotina* / blackcherry; QUENIG = *Quercus nigra* / water oak; QUEVIR = *Quercus virginiana* / live oak; SAPSEB = *Sapium sebiferum (Triadica sebifera)* / Chinese tallow tree.

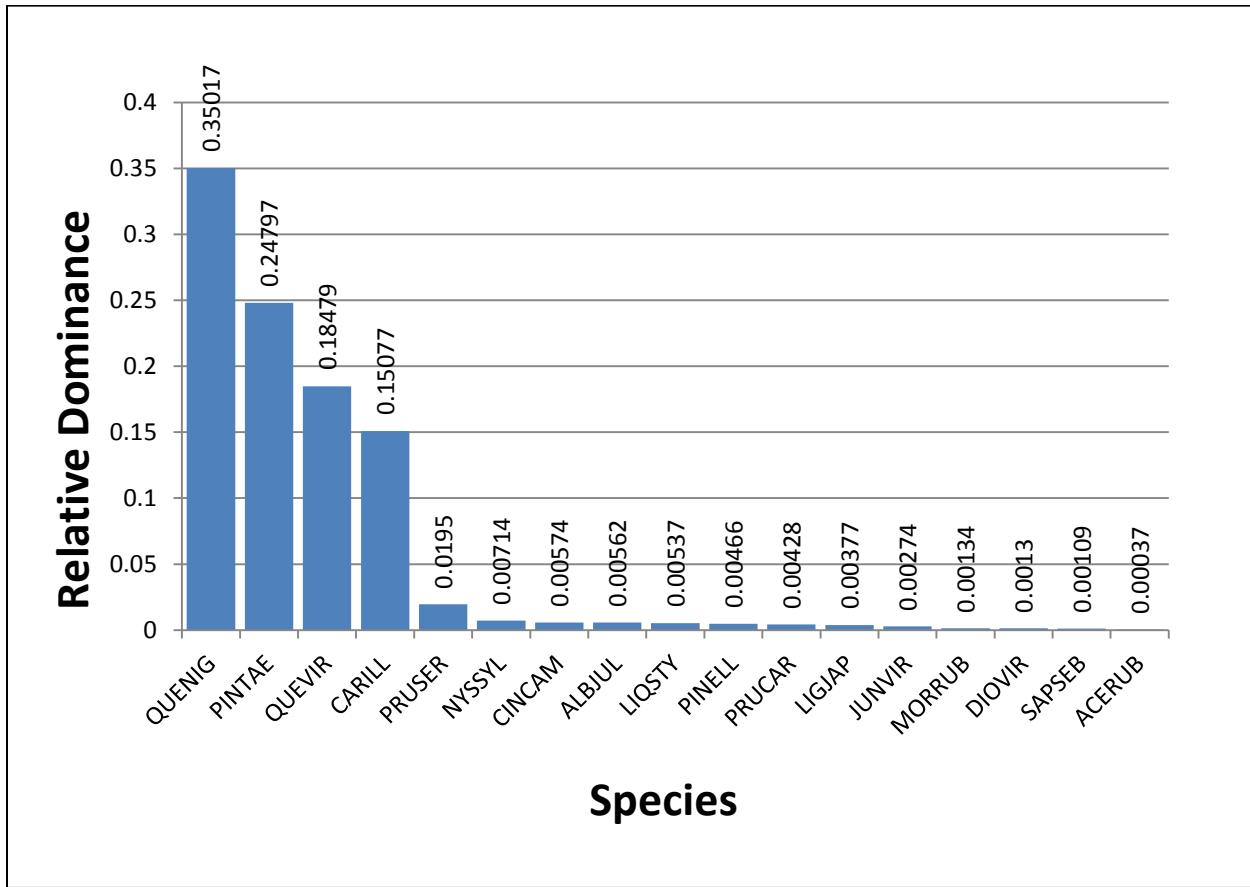

Figure 4. Relative dominance of trees with DBH  $\geq 25$  mm. Key to abbreviations: ACERUB = *Acer rubrum* / red maple; ALBJUL = *Albizia julibrissin* / mimosa; CARILL = *Carya illinoensis* / pecan; CINCAM = *Cinnamomum camphora* / camphortree; DIOVIR = *Diospyros virginiana* / persimmon; JUNVIR = *Juniperus virginiana* / red cedar; LIGLUC = *Ligustrum lucidum* / glossy privet; LIQSTY = *Liquidambar styraciflua* / sweetgum; MORRUB = *Morus rubra* / red mulberry; NYSSYL = *Nyssa sylvatica* / blackgum; PINELL = *Pinus elliottii* / slash pine; PINTAE = *Pinus taeda* / loblolly pine; PRUCAR = *Prunus caroliniana* / Carolina laurelcherry; PRUSER = *Prunus serotina* / blackcherry; QUENIG = *Quercus nigra* / water oak; QUEVIR = *Quercus virginiana* / live oak; SAPSEB = *Sapium sebiferum (Triadica sebifera)* / Chinese tallow tree.

Additional considerations. A rubbish heap was noted in the area immediately adjacent to the church, which included what appeared to be mostly old, rusty metal cans and tin left from the days when the

Figure 5. Location of waypoints 013-439 taken during tree survey, cf. Appendix A.

site was part of the neighboring farm. Several of the larger pecan trees are diseased and should be removed – in particular one along the woods' edge immediately adjacent to the church (Waypoint 184). Also, the “green island” just west of the fenced playground contains a number of large specimens of *Ligustrum lucidum* (glossy privet) that should receive high priority for removal and replacement with appropriate indigenous plants (Figures 8A-B).

#### CONCLUSIONS

Increasingly, the attributes and benefits of urban green space are being recognized (cf. Kramer and Dorfman, 2010; Padoa-Schioppa, 2009). Although exhibiting substantial anthropogenic effects, the St. Barnabas Episcopal Church property is valuable green space within the rapidly expanding Valdosta metropolitan area, and this is especially the case when its restoration potential and possibilities of environmental education are considered.

Presumably having been dispersed into the area naturally during the process of ecological succession, the following native species are well represented in the plant community at the study site: *Quercus nigra*, *Q. virginiana*, *Pinus taeda*, *Prunus caroliniana*, and *P. serotina*. A number of other indigenous species are present, but are less frequent, and should be preserved in efforts to take advantage of the existing diversity: *Magnolia grandiflora*, *Quercus stellata*, *Nyssa sylvatica*, *Diospyros virginiana*, *Juniperus virginiana*, *Morus rubra*, and *Ilex vomitoria* (Figures 7, 8C-D). Although not indigenous to the interior of Georgia (including Lowndes County), *Sabal palmetto* is a native of hammock communities along the coast; therefore, it should be preserved. The high relative frequency and relative dominance of *Pinus taeda*, *Quercus nigra*, and *Quercus virginiana* indicate succession toward a hardwood dominated community, as do moderate levels of species such as *Prunus serotina*, *Prunus caroliniana*, *Nyssa sylvatica*, and *Liquidambar styraciflua*. The low frequency and immature state of *Magnolia grandiflora* suggest it and other common associates would eventually be present in the mature climax community at this particular site, perhaps a community comprised of beech, magnolia, oak and hickory (cf. Quarterman and Keever, 1962). Ecological succession and its most likely outcome should be taken into consideration in selecting species for a landscape design.

Recommendations. Based upon the results of this tree survey, the following recommendations are made for preserving the study area as green space and as an arboretum emphasizing indigenous species.

- Develop a theme for the low-impact use of the area, e.g., an arboretum emphasizing indigenous species
- Incorporate the use of indigenous plants already present on site, whenever possible, with an emphasis on maintaining as much of the existing diversity as possible
- Divide the area into zones, and prioritize these zones for installation of landscape elements
- Initiate a program to systematically reduce the level of non-indigenous invasive species, i.e., establish priorities and *realistic goals* for reduction or elimination of these plants
- As they are removed, replace non-indigenous plants with ecologically equivalent native species
- Develop a master list of desirable indigenous species for introduction to the site, including general information on habitat requirements for each species
- Whenever possible, introduce native species from seeds or cuttings obtained from locally occurring populations
- Establish a program for regular monitoring of restored areas and measures to prevent reestablishment of non-indigenous species
- Develop an educational program around restoration efforts, which emphasizes stewardship and – while including parishioners of all ages – particularly involves adolescents and pre-adolescents

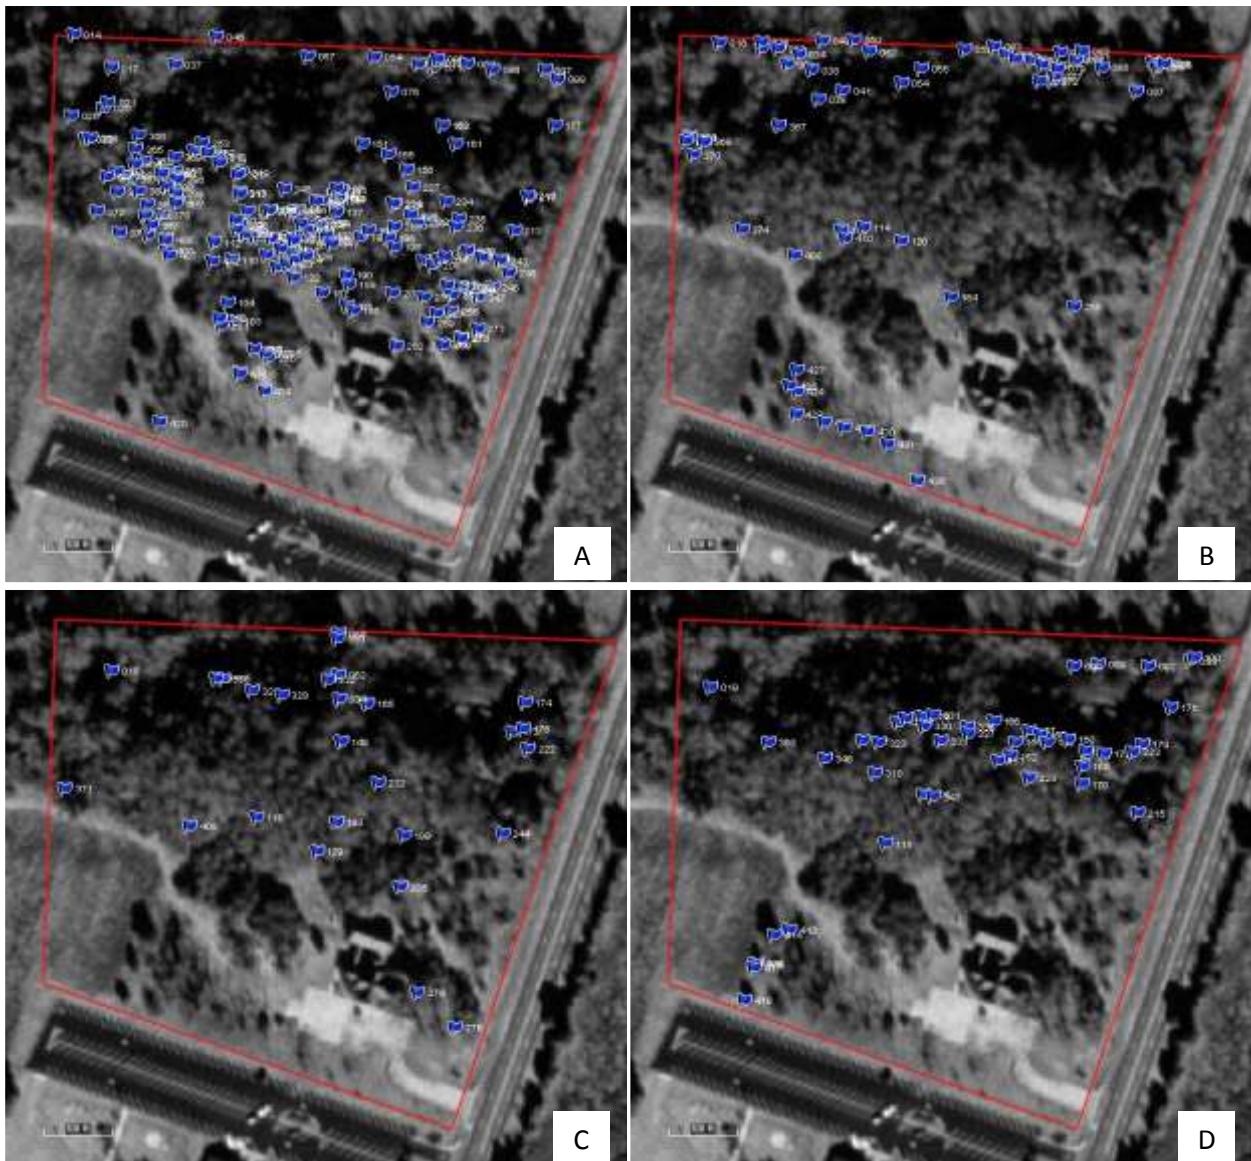

Figure 6. The distributions of the four most common tree species: *Quercus nigra* (A), *Carya illinoensis* (B), *Quercus virginiana* (C), and *Pinus taeda* (D).

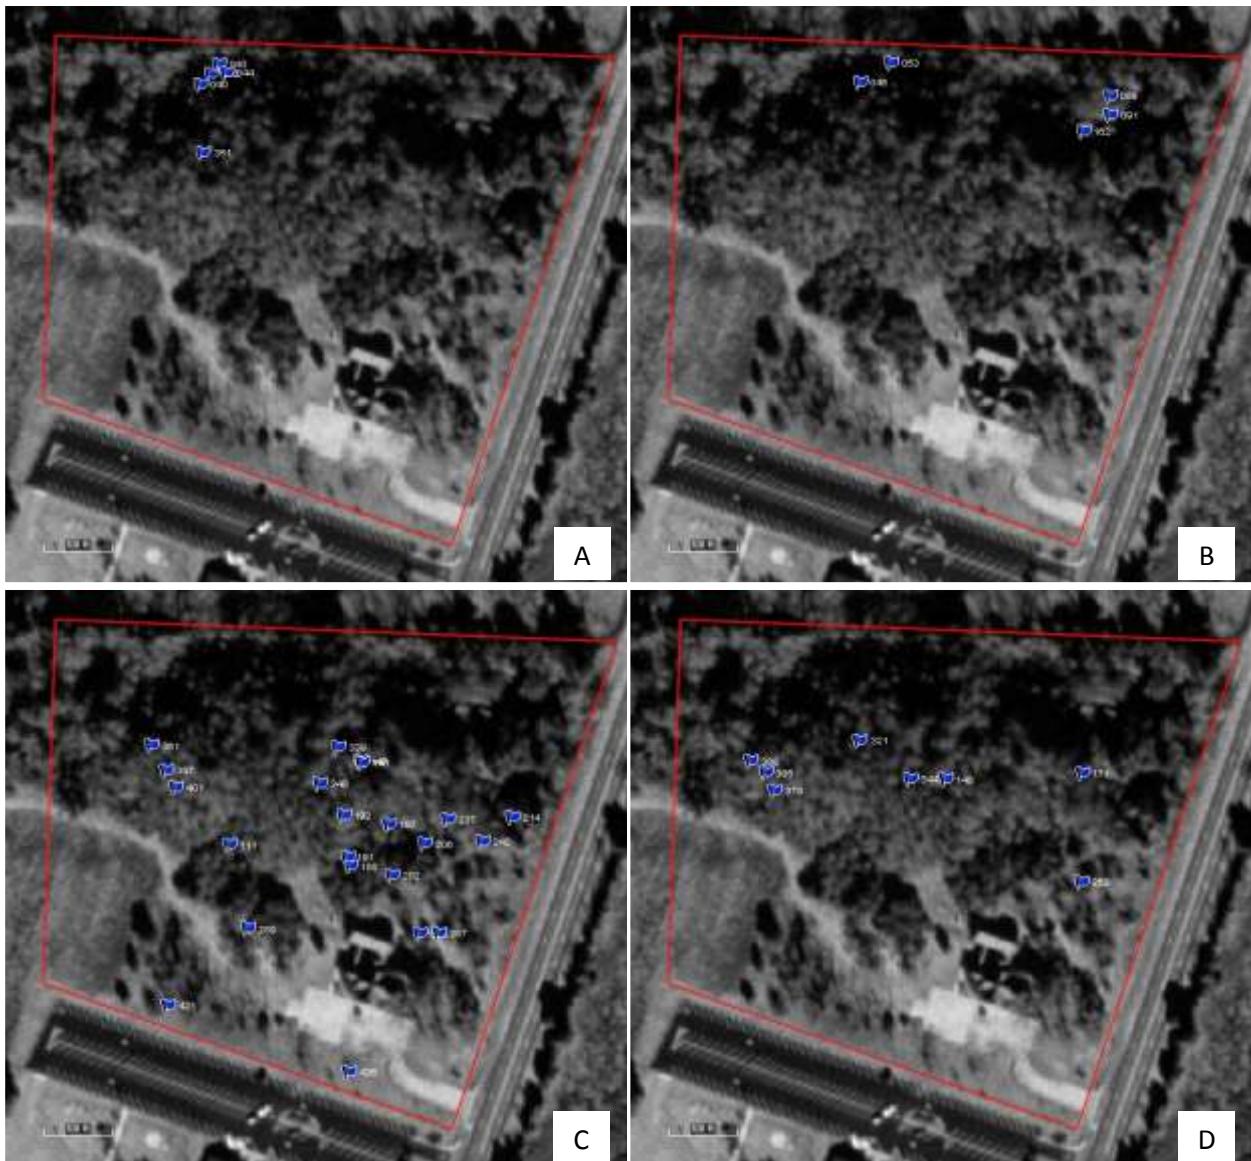

Figure 7. The distributions of four moderately frequent indigenous tree species: *Liquidambar styraciflua* (A), *Acer rubrum* (B), *Prunus serotina* (C), and *Magnolia grandiflora* (D).

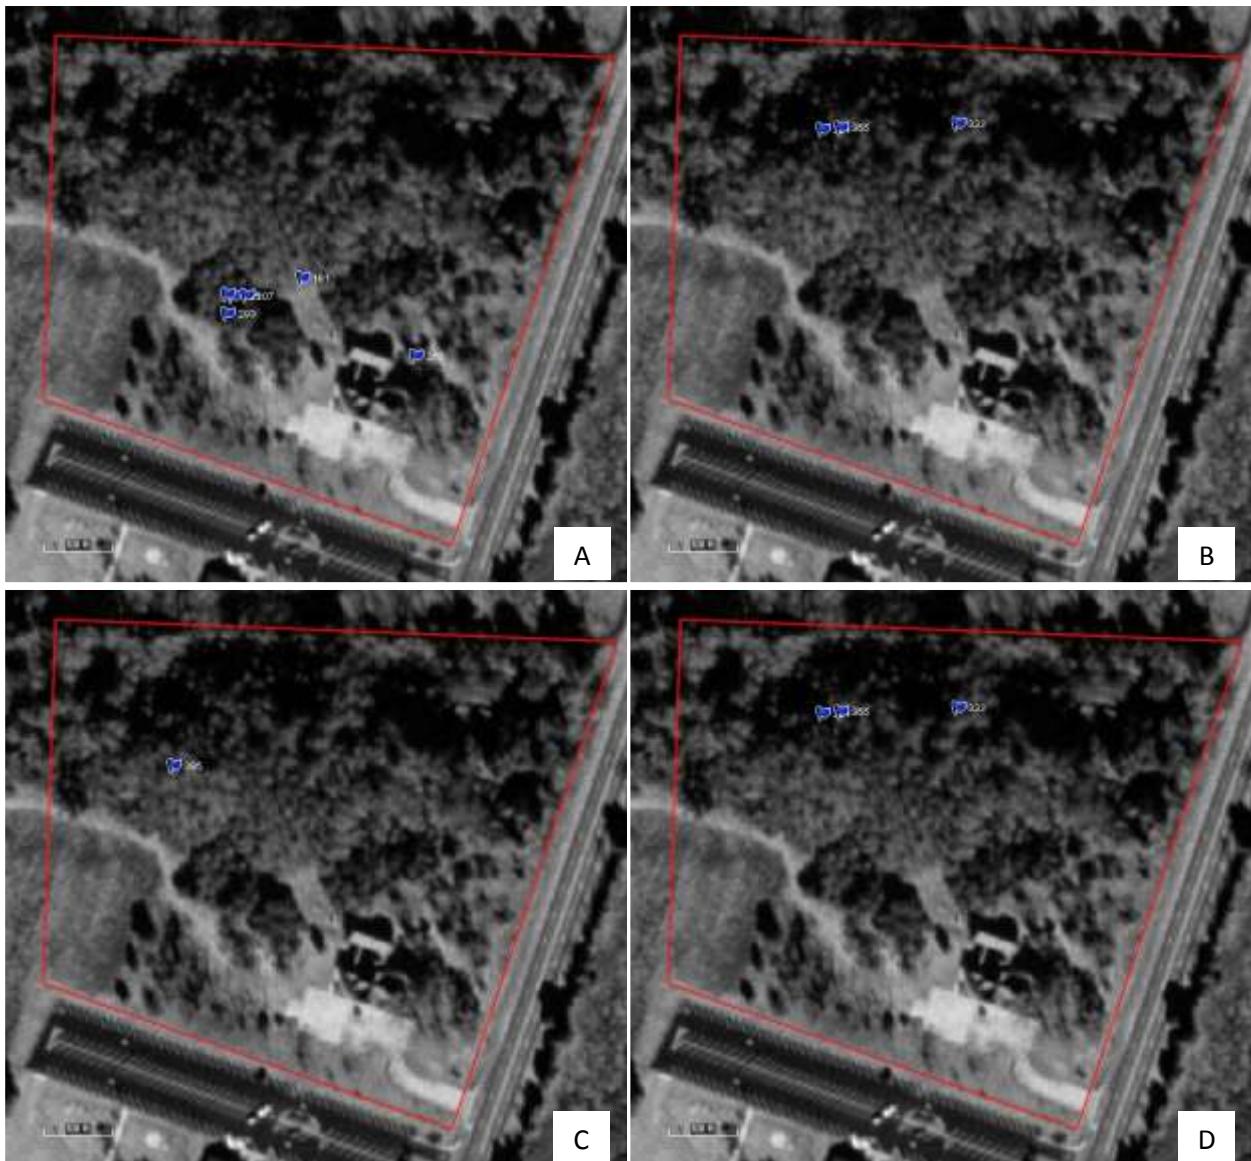

Figure 8. The distributions of two non-indigenous, invasive species: *Ligustrum lucidum* (A) and *Sapium sebiferum* (B), and two infrequent indigenous species: *Ilex vomitoria* (C) and *Nyssa sylvatica* var. *biflora* (D).

**Appendix B.** General list of species observed. Key to symbols used: ♦ = indigenous (native) species; Δ = species indigenous to the southeastern United States, but not indigenous to the immediate area; \* = non-indigenous species; [bracket] = invasive, non-indigenous species that should be a target for removal.

Scientific Name	Common Name	Status
<i>Acalypha gracilens</i>	slender three-seed mercury	♦
<i>Acer rubrum</i>	redmaple	♦
[ <i>Albizia julibrisin</i> ]	mimosa	*
[ <i>Aleurites fordii</i> ]	tungoil tree	*
<i>Ambrosia artemisifolia</i>	common ragweed	♦
[ <i>Ardisia crenata</i> ]	coralberry	*
<i>Asplenium platyneuron</i>	ebony spleenwort fern	♦
<i>Baccharis halimifolia</i>	eastern baccharis	♦
<i>Betula nigra</i>	river birch	♦
[ <i>Bidens alba</i> ]	beggarticks	*
<i>Boehmeria cylindrica</i>	false nettle	♦
<i>Butia capitata</i>	pindo palm	*
<i>Callicarpa americana</i>	American beautyberry	♦
<i>Campsis radicans</i>	trumpet creeper	♦
<i>Carex caroliniana</i>	Carolina sedge	♦
<i>Carex longii</i>	Long's sedge	♦
<i>Carex lurida</i>	shallow sedge	♦
<i>Carya illinoensis</i>	pecan	Δ
<i>Celtis laevigata</i>	hackberry	♦
<i>Chamaecrista fasciculatum</i>	partridge pea	♦
<i>Chasmanthium laxum</i>	slender woodoats	♦
[ <i>Cinnamomum camphora</i> ]	camphortree	*
<i>Cirsium nuttallii</i>	Nuttall's thistle	♦
<i>Commelinia communis</i>	Asiatic dayflower	*
<i>Conoclinium coelestinum</i>	blue mistflower	♦

<i>Conyza bonariensis</i>	asthma weed	*
<i>Cynodon dactylon</i>	coastal Bermuda grass	*
<i>Cyperus croceus</i>	Baldwin's flatsedge	♦
<i>Cyperus haspan</i>	a flatsedge	♦
<i>Cyperus retrorsus</i>	a flatsedge	♦
<i>Cyperus virens</i>	green flatsedge	♦
<i>Dactyloctenium aegyptium</i>	Durban crowfootgrass	*
<i>Desmodium tortuosum</i>	Florida beggarticks	*
<i>Dichanthelium dichotomum</i>	cypress witchgrass	♦
<i>Dichondra carolinensis</i>	Carolina ponyfoot	♦
<i>Digitaria sp.</i>	a crabgrass	*
<i>Diodia teres</i>	poor joe	♦
<i>Diospyros virginiana</i>	persimmon	♦
<i>Echinochloa colona</i>	jungle rice	*
<i>Eclipta alba</i>	false daisy	♦
[ <i>Elaeagnus pungens</i> ]	silverthorn	*
<i>Eleusine indica</i>	Indian goosegrass	*
<i>Erechtites hieraciifolius</i>	American burngrass	♦
<i>Eremochloa ophiuroides</i>	centipedegrass	*
<i>Saccharum giganteum</i>	sugarcane plumegrass	♦
<i>Eupatorium capillifolium</i>	dogfennel	♦
<i>Poinsettia heterophylla</i>	fiddler's spurge	*
<i>Gelsemium sempervirens</i>	yellow jessamine	♦
[ <i>Hedera helix</i> ]	English ivy	*
<i>Hypericum hypericoides</i>	St. Andrew's cross	♦
<i>Ilex cornuta</i>	Chinese holly	*

<i>Ilex vomitoria</i>	yaupon	◊
<i>Ipomoea hederifolia</i>	scarlet morningglory	◊
<i>Jacquemontia tamnifolia</i>	hairy clustervine	◊
<i>Juncus effusus</i>	soft rush	◊
<i>Juniperus virginiana</i>	eastern redcedar	◊
<i>Kyllinga brevifolia</i>	shortleaf spikesedge	*
<i>Kyllinga odorata</i>	fragrant spikesedge	*
<i>Kyllinga pumila</i>	low spikesedge	◊
<i>Lagerstroemia indica</i>	crapemyrtle	*
[ <i>Ligustrum lucidum</i> ]	glossy privet	*
[ <i>Ligustrum sinense</i> ]	Chinese privet	*
<i>Liquidambar styraciflua</i>	sweetgum	◊
<i>Liriope spicata</i>	monkey grass	*
[ <i>Lonicera japonica</i> ]	Japanese honeysuckle	*
<i>Ludwigia decurrens</i>	wingleaf primrosewillow	◊
[ <i>Lygodium japonicum</i> ]	Japanese climbing fern	*
<i>Magnolia grandiflora</i>	bullbay magnolia	◊
[ <i>Melia azedarach</i> ]	Chinaberry	*
<i>Melochia corchorifolia</i>	chocolate weed	*
<i>Mikania scandens</i>	hempvine	◊
<i>Morus rubra</i>	red mulberry	*
[ <i>Nandina domestica</i> ]	nandina	*
<i>Nephrolepis</i> sp.	swordfern	*
<i>Nyssa sylvatica</i>	blackgum	◊
<i>Oplismenus hirtellus</i>	basketgrass	◊
<i>Oxalis corniculata</i>	common yellow woodsorrel	◊
<i>Panicum scoparium</i>	velvet witchgrass	◊
<i>Parthenocissus quinquefolia</i>	Virginia creeper	◊
<i>Paspalum setaceum</i>	thin paspalum	◊
<i>Paspalum notatum</i>	Bahiagrass	*

<i>Paspalum urvillei</i>	Vaseygrass	*
<i>Passiflora incarnata</i>	passionflower	◊
<i>Phyllanthus urinaria</i>	chamber bitter	*
<i>Physalis angulata</i>	cutleaf groundcherry	◊
<i>Phytolacca americana</i>	pokeweed	◊
<i>Pinus elliottii</i>	slash pine	◊
<i>Pinus taeda</i>	loblolly pine	◊
<i>Polygonum hydropiperoides</i>	swamp smartweed	◊
<i>Polypodium polypodioides</i>	resurrection fern	◊
<i>Portulaca pilosa</i>	pink purslane	◊
<i>Prunus caroliniana</i>	Carolina laurelcherry	◊
<i>Prunus serotina</i>	blackcherry	◊
<i>Pyracantha coccinea</i>	pyracantha	*
<i>Pyrrhopappus carolinianus</i>	pyrrhopappus	◊
<i>Quercus michauxii</i>	swamp chestnut oak	◊
<i>Quercus nigra</i>	water oak	◊
<i>Quercus stellata</i>	post oak	◊
<i>Quercus virginiana</i>	live oak	◊
<i>Richardia brasiliensis</i>	buttonweed	*
<i>Rubus cuneifolius</i>	sand blackberry	◊
<i>Rubus trivialis</i>	southern dewberry	◊
<i>Sabal palmetto</i>	cabbage palm	△
<i>Salix nigra</i>	blackwillow	◊
<i>Sambucus canadensis</i>	American elderberry	◊
[ <i>Sapium sebiferum</i> ]	Chinese tallowtree	*
<i>Scirpus cyperinus</i>	wool grass	◊
<i>Senna obtusifolia</i>	sicklepod	*
<i>Sida rhombifolia</i>	Cuban jute	◊
<i>Smilax bona-nox</i>	saw greenbrier	◊
<i>Smilax laurifolia</i>	bamboo vine	◊

<i>Smilax rotundifolia</i>	bullbrier	◊
<i>Smilax smallii</i>	Jackson vine	◊
<i>Solanum americanum</i>	American black nightshade	◊
<i>Solanum carolinense</i>	Carolina horsenettle	◊
<i>Solidago canadensis</i>	goldenrod	◊
<i>Toxicodendron radicans</i>	poison ivy	◊
<i>Urochloa platyphylla</i>	broadleaf signalgrass	◊
<i>Vitis rotundifolia</i>	muscadine	◊
<i>Wahlenbergia marginata</i>	southern rockbell	*
[ <i>Wisteria sinensis</i> ]	Chinese wisteria	*
<i>Woodwardia virginica</i>	Virginia chain fern	◊
